SUMMARY

Data analyst with six years across payments and e-commerce. I own the reporting the commercial team runs on, and I am usually the person their questions land with.

EXPERIENCE

Lead Data Analyst, Paystack-adjacent merchant platform (2023 - 2026)

- Own the revenue, margin and merchant churn models in dbt. 40+ models, tested, documented, and the single source the commercial team quotes from.
- Rebuilt the weekly commercial dashboard in Power BI. Adoption went from 4 users to 31 across commercial and partnerships within a quarter.
- Designed and read the pricing experiment that moved merchant take rate from 1.4% to 1.55% on the SME tier, worth roughly 180m naira annualised.
- Advanced SQL daily: window functions for cohort retention, incremental models for the transaction table at 90m rows.
- Mentor two junior analysts. Both now run their own stakeholder relationships.

Senior Data Analyst, Jumia-scale retail marketplace (2020 - 2023)

- Built the promotions analysis framework used to sign off every campaign. Killed three campaigns pre-launch on projected margin, saving about 45m naira.
- Ran 20+ A/B tests on checkout and search, in Python (pandas, statsmodels).
- Cut the category reporting refresh from 6 hours to 20 minutes by moving the aggregation out of the BI layer and into SQL.

SKILLS

SQL (advanced, window functions, dbt), Python (pandas, numpy, statsmodels), Power BI, Tableau, experiment design, Git, Airflow.

EDUCATION

BSc Statistics, University of Nigeria Nsukka, 2019. First Class.
