SUMMARY

Analytics engineer, four years. Strongest on the modelling layer.

EXPERIENCE

Analytics Engineer, Logistics startup (2023 - 2026)

- Own the dbt project. 60+ models covering deliveries, driver performance and unit economics. Test coverage at 80%.
- Advanced SQL: incremental models, window functions, and the performance work that took the main fact table from a 40-minute to a 6-minute build.
- Python (pandas) for data quality checks and the weekly anomaly report.
- Built the data platform the analysts and the product team query.

Data Analyst, Same company (2022 - 2023)

- Operational reporting for the fleet team. Metabase dashboards.
- Analysis on route efficiency that supported a change saving about 12% on fuel.

SKILLS

SQL (advanced), dbt, Python (pandas), Airflow, Metabase, Snowflake, Git.

NOTES

Most of my dashboard work has been for operations and engineering audiences rather than commercial teams. I have not run formal A/B tests.

EDUCATION

BSc Computer Science, University of Ibadan, 2021.
